

Community Development Program

Program efforts.....

- training of villages in need assessment
- building of relationships with mission teams
- creating self-sustainable projects
- providing improved living conditions
- training in planning, and teamwork
- educating the community about safe water and nutrition

Through HOI's Community Development Program, the living conditions in the Agalta Valley have improved tremendously. Our HOI staff works with a village to analyze and prioritize the needs of their community from a medical perspective. Once a village assesses its needs, a mission team is assigned to work side-by-side with the community to improve their living conditions. Work projects normally include; latrines, cement floors, chimneys, roofs, water connections and family gardens.

You can make a difference in the valley by supporting our Community Development program, so we can continue to improve the lives of the Hondurans.

Please refer to the opposite side for more information.
